

# SMOG FREE PROJECT

Dutch designer Daan Roosegaarde and his team of experts are using patented ion technology to build the world's largest smog vacuum cleaner. The Smog Free Tower produces smog-free bubbles of public space, allowing people to breathe and experience clean air for free.

Creating a tangible souvenir, Roosegaarde designed Smog Free Rings and Smog Free Cufflinks of compressed smog particles. By sharing a Smog Free Jewellery, you donate 1000m<sup>3</sup> of clean air to the city.

The Smog Free Project is not only intended to be a final solution, but also a sensual experience of a clean future. Along with governments, NGOs and the clean-tech industry, people become part of the solution instead of the problem. Join the Smog Free Movement now and support our [Kickstarter](#).

2014-2018. The first 7-meter high Smog Free Tower equipped with energy-friendly and patented ion technology will be realised in September 2015 in Rotterdam NL, and will then travel around the world. The first Smog Free Tower cleans 30.000m<sup>3</sup> per hour and runs on green energy. Smog Free Rings and Smog Free Cufflinks are now available via [Kickstarter](#).
